

Implement Client Script & UI Policy (Incident)

1. Ideation

Problem Statement

Incident records require consistent and accurate data entry for effective triage, routing, and resolution. Manual checks can result in incomplete, inconsistent, or incorrect data, affecting reporting accuracy, SLA compliance, and service quality.

Proposed Idea

Use ServiceNow UI Policies and Client Scripts to enforce conditional field behavior and validation directly at the Incident user interface.

Core User Need

Incident users need clear, automatic controls that make relevant fields mandatory, control field behavior, populate values when conditions are met, and prevent invalid records from being submitted.

Expected Benefits

- Improved data integrity and consistency.
- Conditional mandatory-field enforcement.
- Automatic urgency update for high-impact incidents.
- Controlled field behavior through UI Policy Actions.
- Save-time validation for Assigned To.
- Prevention of direct State changes through list editing.

Ideation Information Not Provided

The source does not provide team members, team ID, workshop dates, interview notes, or a separate brainstorming record.

Source basis: supplied 18-page Project 3 PDF. Unsupported project metadata, screenshots, execution results, and dates are not fabricated.
