

Implement Client Script & UI Policy (Incident)

4. Planning

Task 1 – UI Policy

- Open System UI → UI Policies.
- Create High Impact Control on Incident.
- Set Impact = 1 – High.
- Make Assignment group mandatory.
- Enable Reverse if false.
- Submit.

Task 2 – UI Policy Action

- Open High Impact Control.
- Create the Urgency action.
- Set Read-only = true.
- Leave Visible unchanged.
- Submit.

Task 3 – onChange Client Script

- Create Auto set urgency for high impact.
- Set Table = Incident, Type = onChange, Field = Impact, Active = true.
- Add the documented script.
- Submit.

Task 4 – onSubmit Client Script

- Create Prevent save if Assigned To missing.
- Set Table = Incident, Type = onSubmit, Active = true.
- Add the documented validation script.
- Submit.

Task 5 – onCellEdit Client Script

- Create Prevent state change via list edit.
- Set Table = Incident, Type = onCellEdit, Field = State, Active = true.
- Add the documented blocking script.
- Submit.

Planning Data Not Provided

The source does not specify sprint dates, owners, story points, velocity, deadlines, or resource estimates. These are not invented in this answer pack.

Source basis: supplied 18-page Project 3 PDF. Unsupported project metadata, screenshots, execution results, and dates are not fabricated.
