

Implement Client Script & UI Policy (Incident)

5. Testing & Validation

Test 1 – Mandatory Enforcement

- Create a new Incident.
- Set Impact to High.
- Leave Assigned To empty.
- Attempt to submit.
- Expected: Incident is not saved and an error indicates Assigned To cannot be empty.

Test 2 – Successful Save

- Set Assigned To to a user.
- Submit the Incident.
- Expected: Incident saves successfully.
- Confirm urgency auto-setting, read-only behavior, and State restrictions.

Test 3 – Reverse Condition

- Open an Incident with Impact = High.
- Change Impact to Medium.
- Expected: Assigned To is no longer mandatory and Urgency becomes editable.
- Save the record successfully.

Test 4 – List Edit Blocking

- Open Incident → All.
- Double-click the State field.
- Expected: alert appears and State remains unchanged.

Test 5 – Form-Based State Update

- Open the Incident record.
- Change State on the form.
- Click Update.
- Expected: State change saves successfully.

Test Evidence Note

The source documents expected verification behavior but does not provide actual execution screenshots, defect IDs, timestamps, or measured performance results.

Source basis: supplied 18-page Project 3 PDF. Unsupported project metadata, screenshots, execution results, and dates are not fabricated.
